

Spot Light Mount Bar for Landrover Defender

Front Mounting

Product Details and Variations

A simple yet effective low profile accessory to neatly mount your spot lamps, hazard warning lamps and Antennas with the minimum of fuss and weight.

Available in both powder coated steel and highly polished stainless steel the bar fits perfectly into the guttering at the front of the roof. Four holes are drilled for mounting with stainless fixings which are supplied.

Rocard Light bars are not heavy, they don't need to be. It is designed to carry lamps and accessories which themselves are lightweight, even the heaviest HID lamps are securely held in place. We don't believe in massively over-rating components, we understand that weight is an issue and we save more than 2.5 kg over a competitors product manufactured from heavy sections and end profiles. A Rocard light bar weighs less than 2.5kg.

Stainless steel hanks are press fitted during manufacture which aid installation and prevent corrosion thus allowing easy removal.

Powder coated versions are shot blasted prior to coating to ensure a durable and long lasting finish which will not lift if stone chips occur.

All welding is carried out by qualified professional personnel making for excellent strength and longevity.

A range of configurations are available depending on your needs. this includes 4 and 6 brackets for lamps and versions with CB bracket.

For batch runs and special requirements we are delighted to cater to your specific needs. Just contact us.
